The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Short term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns. Market price is the price at which shares in the ETF can be bought or sold on the exchanges during trading hours, while the net asset value (NAV) represents the value of each share's portion of the fund's underlying assets and cash at the end of the trading day.

About F/m Investments

F/m is a \$4 billion multi-boutique investment advisor platform designed to support 100% of non-investment responsibilities of an asset management firm. F/m empowers growth and independence for boutiques, lift-outs, and overseas asset managers looking to access the US market. F/m provides portfolio managers with institutional-grade investment systems, business operations and marketing and sales support, enabling talented managers to focus on what they do best: managing investments and delivering performance.

Investments involve risk. Principal loss is possible.

Index Related Risk: There is no guarantee that the Fund’s investment results will have a high degree of correlation to those of the Underlying Index or the Funds will achieve their investment objective.

Tracking Error Risk. The Funds may be subject to tracking error, which is the divergence of the Fund’s performance from that of the Underlying Index

As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise.

Fund Risks: The value of each Fund’s investments may decrease, which will cause the value of each Fund’s Shares to decrease. As a result, you may lose money on your investment in each Fund, and there can be no assurance that each Fund will achieve its investment objective.

The Funds are distributed by Quasar Distributors, LLC. Quasar is not related to US Benchmark Series or F/m Investments.
