## The US Treasury 3 Month Bill ETF

### A US Treasury ETF Designed to Equitize the 3-Month US Treasury

#### Single Bond ETF

##### INVESTMENT OBJECTIVE

The investment objective of the US Treasury 3 Month Bill ETF (the "UST 3 Month Bill Fund") is to seek investment results that correspond (before fees and expenses) generally to the price and yield performance of the ICE BofA US 3-Month Treasury Bill Index (G001).

##### Underlying Bond:

The US Treasury auctions a new 3-Month Treasury bill each week. The auction will determine the coupon rate of each new on-the-run<sup>1</sup> note. Once the auction is complete and can be settled, TBIL will sell the currently held, old 3-Month US Treasury and roll into the newly issued 3-Month US Treasury.

#### Fund Details

As of 03/31/2024

Ticker	<b>TBIL</b>
CUSIP	<b>74933W452</b>
Exchange	<b>NASDAQ</b>
Inception	<b>August 9, 2022</b>
# of Holdings	<b>5*</b>
Management Fees	<b>0.15% Per Annum</b>
Total Account Operating Expenses	<b>0.15% Per Annum</b>
Leverage	<b>NONE</b>

##### Broad, direct access

Gain access to specific US Treasury securities within the ease and efficiency of an ETF.

##### Targeted use

Single security exposure allows for targeted duration management as compared to a portfolio of bonds.

##### Increased cashflow frequency

The ETF will seek to pay monthly income, more frequently than the semi-annual payments of the underlying bond.

##### Tax-efficiency

ETF structure helps reduce potential capital gains.

##### Consistent Maturity

Always own the current, on-the-run US Treasury security. Economies of scale reduce transaction costs and the operational burden of continually rolling to the next US Treasury security as it is issued.

##### Flexibility

The Benchmark Series ETFs enable any investor to express a view on rates - through buying, shorting or utilizing options.

### Potential benefits:

1

TBIL aims to provide exposure to the current US 3 Month Treasury Bill, with the ease and efficiency of an ETF.

2

TBIL aims to make monthly dividend payments, more frequent than those of the underlying security.

3

Minimize transaction costs and the operational burden required to continually roll to the new US Treasury Security as it is issued - and enjoy the potential tax efficiencies of an ETF.

\* Includes some nominal cash

	YTD	1 Month	3 Month	6 Month	1 Year	Since Inception
TBIL NAV	1.26%	0.44%	1.26%	2.62%	5.20%	4.69%

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For the most recent month-end performance, please call 1-800-617-0004 or visit our website at [www.ustreasuryetf.com](http://www.ustreasuryetf.com) Short term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns. Market price is the price at which shares in the ETF can be bought or sold on the exchanges during trading hours, while the net asset value (NAV) represents the value of each share's portion of the fund's underlying assets and cash at the end of the trading day. Performance returns for periods of less than one year are not annualized.

RISK FACTORS

**1 New On-The-Run** refers to the periodic transition to the most-recently auctioned Treasury bill, note, or bond of a stated maturity, which is referred to as the "on-the-run" or "OTR" security of that maturity, occurs on one day. An OTR security is the most recently issued of a periodically issued security (as opposed to an off-the-run security, which is a security that has been issued before the most recent issue and is still outstanding).

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. For a prospectus or summary prospectus with this and other information about the Fund, please call 1-800-617-0004 or visit our website at [www.ustreasuryetf.com](http://www.ustreasuryetf.com). Read the prospectus or summary prospectus carefully before investing.

As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt instruments tend to fall, and if interest rates fall, the values of debt instruments tend to rise.

**Fund Risks:** The UST 3 Month Bill Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the UST 3 Month Bill Fund's investments more than the market as a whole, to the extent that the UST 3 Month Bill Fund's investments are concentrated in a particular issue, issuer or issuers, country, market segment, or asset class. While U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. Government, such securities are nonetheless subject to credit risk (i.e., the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments).

**Index Related Risk:** There is no guarantee that the UST 3 Month Bill Fund's investment results will have a high degree of correlation to those of the Underlying Index or that the UST 3 Month Bill Fund will achieve its investment objective.

**Tracking Error Risk:** The UST 3 Month Bill Fund may be subject to tracking error, which is the divergence of the UST 3 Month Bill Fund's performance from that of the Underlying Index

**ICE BofA US 3-Month Treasury Bill Index** is comprised of a single issue purchased at the beginning of the month and held for a full month. At the end of the month that issue is sold and rolled into a newly selected issue. The issue selected at each month-end rebalancing is the outstanding Treasury Bill that matures closest to, but not beyond, three months from the rebalancing date. To qualify for selection, an issue must have settled on or before the month-end rebalancing date.

**Duration** is a measure of the sensitivity of the price of a bond or other debt instrument to a change in interest rates.

**30 Day SEC Yield:** Based on a 30-day period ending on the last day of the previous month. It is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. The figure listed lags by one month. When a dash appears, the yield available is not available yet.

Investments involve risk. Principal loss is possible.
